

Cross-Conveyor

Spreader

The Meyer® Cross-Conveyor Dump Truck Spreader is an under-tailgate system designed for medium-duty dump trucks (15,000 GVW and larger). Built from durable carbon steel and powered by the truck's central hydraulic system, this powerful spreader distributes materials like aggregate, asphalt, salt, and sand with ease. Whether you're tackling road maintenance in summer or managing icy conditions in winter, the Cross-Conveyor ensures your truck is ready for whatever job comes your way.

Highlights

- **Replaceable rubber chain shields** run the full length of the trough.
- **Screw-type gate jacks** for adjustable material output.
- **Dual side feed gates** allow material to be discharged from either side (when using optional spinner attachment).
- **Optional four-foot motorized conveyor extension** gives you extra reach

Your benefits

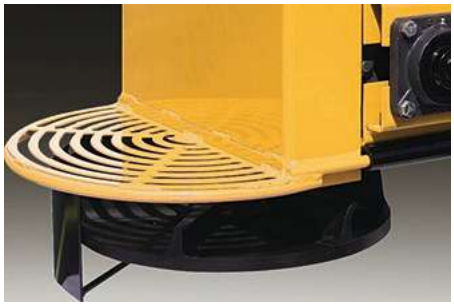

- **Durable:** The powder-coated paint finish extends the life of your spreader.
- **Versatile:** Below-the-dump-body mounting allows full functionality of your dump truck all year long.
- **Efficient:** A quick-detach 24-inch extension can be removed without tools.
- **Reliable:** Rubber chain shields minimize material build-dup in the conveyor chain and reduced the frequency and cost of maintenance.
- **Adaptable:** Optional spinner attachment and reversing valve provide improved material distribution and handling, especially useful in icy conditions.

Performance features

Construction

The Meyer Cross-Conveyor Dump Truck Spreader is built with a durable carbon steel hopper designed to handle a variety of materials including aggregate, asphalt, salt, and sand, and is engineered for both reliability and precision in material distribution. It's tough construction ensures longevity and the ability to withstand both seasonal and all-year use. The Cross-Conveor mounts quickly and easily under the dump truck's tailgate, letting you use the vehicle for normal dump operations when the spreader is not in use, so no seasonal changeout required.

Motor

The Cross Conveyor is driven by a central hydraulic system, ensuring consistent operation capable of handling a wide range of spreading tasks efficiently and reliably.
